

CTVSM-81 8 Input Video Switcher

A Whole New Concept In Security Camera Monitoring.
 Introducing The “**ZORANGE**” CTVSM-81
 Switches between up to 8 security cameras,
 then modulates the output on to a television channel.

Features:

- LED channel display
- Auto power outage recovery
- 20 dB adjustable output
- Easy to use
- Studio quality pictures
- Precise PLL synthesizer
- Up to eight video inputs with LED indication of video monitored
- Variable time (4 to 25 second) dwell time
- Pause on any camera with the push of a button
- Both home and automatic scan functions are user accessible
- User settable bypass function
- Covers standard Cable or Off-air TV band from 470 to 862 MHz (NTSC CATV channels 65-94, 100-135; Off-air channels 14-78)
- Power adapter included

The CTVSM-81 video **switcher-modulator** sequentially switches between up to 8 security cameras while creating a new television channel to view the output in the customer’s house. Users can select any available channel of the Cable TV ultra band or UHF off-air band by touching the up/down buttons. This agile design offers the Dealer the easiest method of installation and trouble free operation. The output power is 20 dBmV, enough to power all TV sets in an average house. The user can push a button to select any of the security cameras to pause on that video.

These units are housed in attractive, low profile cases with channel output selection buttons on the front panel. The selected channel number is displayed in the channel selection window and features channel memory in case of a power failure.
