

# Compression Connector Crimping Tool

## Features:

- Durable, hardened steel design
- Adjustable plunger to accommodate many different sizes of connectors
- Includes three adapters for use with F, BNC and RCA connectors
- Soft plastic handle
- Priced to save money without sacrificing quality

The Securitytronix CT-CCT-BFR2 is a linear compliant compression tool with three universal adaptors and an adjustable plunger for F-type, RCA, and BNC compression connectors on RG6 and RG59 coaxial cables. This tool supports Securitytronix compression connectors (CT-BNC59C and CT-RCA59CSP) as well as compression connectors from other vendors.

The Securitytronix compression connectors and tools have been designed with the CCTV, home theatre, satellite and cable television markets in mind. Throughout the years, we have seen countless service calls that resulted in the simple replacement of a twist-on or hex crimp connector that had lost it's connectivity. These service calls are costly and they do not promote forward progress in any business, especially if the job is under a service contract.

Compression connectors provide the advantages of waterproofing, cable signal ingress/egress elimination, and connection reliability over other connector products. Compression style connectors are the wave of the future providing a true 360° seal between the connector and cable. Aside from eliminating the opportunity for moisture to leak into the connection this seal keeps your signal inside the cable and keeps unwanted signals from entering your system through openings in the connection.

The CT-CCT-BFR2 has been designed to be aggressively priced to offer value to installers in the security, cable TV, satellite TV and home entertainment markets. Aside from it's aggressive pricing, we feel that the real savings is found in the quality. If we can save you just one service call, these connectors and tools will have paid for themselves exponentially. Please contact us for more information or samples so you can see for yourself.
